Summary

Passionate Software Developer with experience in designing and developing scalable full-stack web applications and AI-powered software solutions. Strong foundation in software engineering, modern web technologies, RESTful APIs, and database systems, with hands-on experience leveraging Modern AI tools and technologies to build intelligent, efficient applications that solve real-world problems.

Education

Anil Neerukonda Institute of Technology and Sciences

B.Tech , Electrical and Electronics Engineering

Expected May 2027

Visakhapatnam , Andhra Pradesh

Relevant Coursework

- Data Structures & Algorithms
- Database Management Systems
- Computer Networks
- Object-Oriented Programming
- Operating Systems
- Software Engineering

Work Experience

Database Intern (MySQL)

May 2025 – July 2025

ExcelR EdTech Pvt. Ltd.

- Designed and executed 50+ SQL queries for data retrieval, filtering, joins, and aggregation, building a strong foundation in relational schema design later applied to production MongoDB schemas across full-stack projects.
- Performed CRUD operations and analyzed real-world database workflows, developing an understanding of data modeling and query optimization that carried directly into backend API design.
- Collaborated on hands-on assignments involving table constraints and normalization, strengthening the database fundamentals underlying scalable application architecture.

Projects

Liveloam – Real-Time Collaborative Task Management Platform | *React.js, Node.js, Express.js, MongoDB, Redis, Socket.IO*

- Architected a full-stack real-time collaboration platform (Trello-style Boards/Lists/Cards) with OTP-verified registration, JWT access tokens paired with 30-day httpOnly refresh tokens, and role-based Team workspaces with automatic member inheritance across boards.
- Implemented live multi-user synchronization via Socket.IO across dual namespaces (board events and team chat), including presence tracking and instant card/list updates with zero page refresh.
- Designed a Redis layer serving four purposes: OTP storage with TTL and rate-limited resend, cache-aside board caching with write invalidation, API rate-limiting middleware, and a Socket.IO pub/sub adapter enabling horizontal scaling across multiple server instances; deployed with Docker Compose and CI/CD via GitHub Actions.

TripPilot – AI Travel Management Platform | *React.js, Node.js, Express.js, MongoDB, Groq AI, JWT, Tailwind CSS*

- Architected a full-stack AI-powered travel management platform with JWT-based authentication, role-based authorization (User, Premium, Admin), and a scalable modular MERN architecture.
- Integrated Groq AI to power an AI Travel Copilot generating personalized itineraries, budget optimization, and contextual travel recommendations.
- Designed secure RESTful APIs for trip management, itinerary timelines, expense tracking, and AI chat history, with RBAC-gated premium feature access.
- Deployed on Vercel and Render with MongoDB Atlas for scalable data storage.

AI Mock Interview Platform | *React.js, Node.js, Express.js, MongoDB, Groq AI, JWT*

- Developed a full-stack AI-powered interview preparation platform with secure JWT-based authentication and a responsive user interface.
- Integrated Groq AI to dynamically generate interview questions and deliver AI-based answer evaluation and feedback.
- Designed RESTful APIs for user management, interview sessions, and interview history tracking, deployed on Vercel and Render.

Skills

Languages: Python, JavaScript, TypeScript, SQL

Libraries/Frameworks: Node.js, Express.js, React.js, Next.js, Socket.IO, Tailwind CSS, Zod, Nodemailer

Database Systems: MongoDB, MySQL, PostgreSQL, Redis

Developer Tools: Git, GitHub, Docker, GitHub Actions, Postman,, Vercel, Render

Soft Skills: Problem Solving, Team Collaboration, Adaptability, Time Management

Achievements

- Completed **Full-Stack Development Certification** from **Simplilearn** (January 2026).
- Earned **Artificial Intelligence Fundamentals Certification** from **IBM SkillBuild** (December 2025).
